KOREN Overview

NIA 한국정보사회진흥원

- KOREN : KOREA Advanced REsearch Network
  - Non-profit research network
  - Funded by Government [MIC]
  - Established in 1995
  - NIA started its participation in KOREN from 2002
- Support network service and R&D Project
  - Currently, 79 R&D institutions
  - 9 funded R&D Projects in 2007

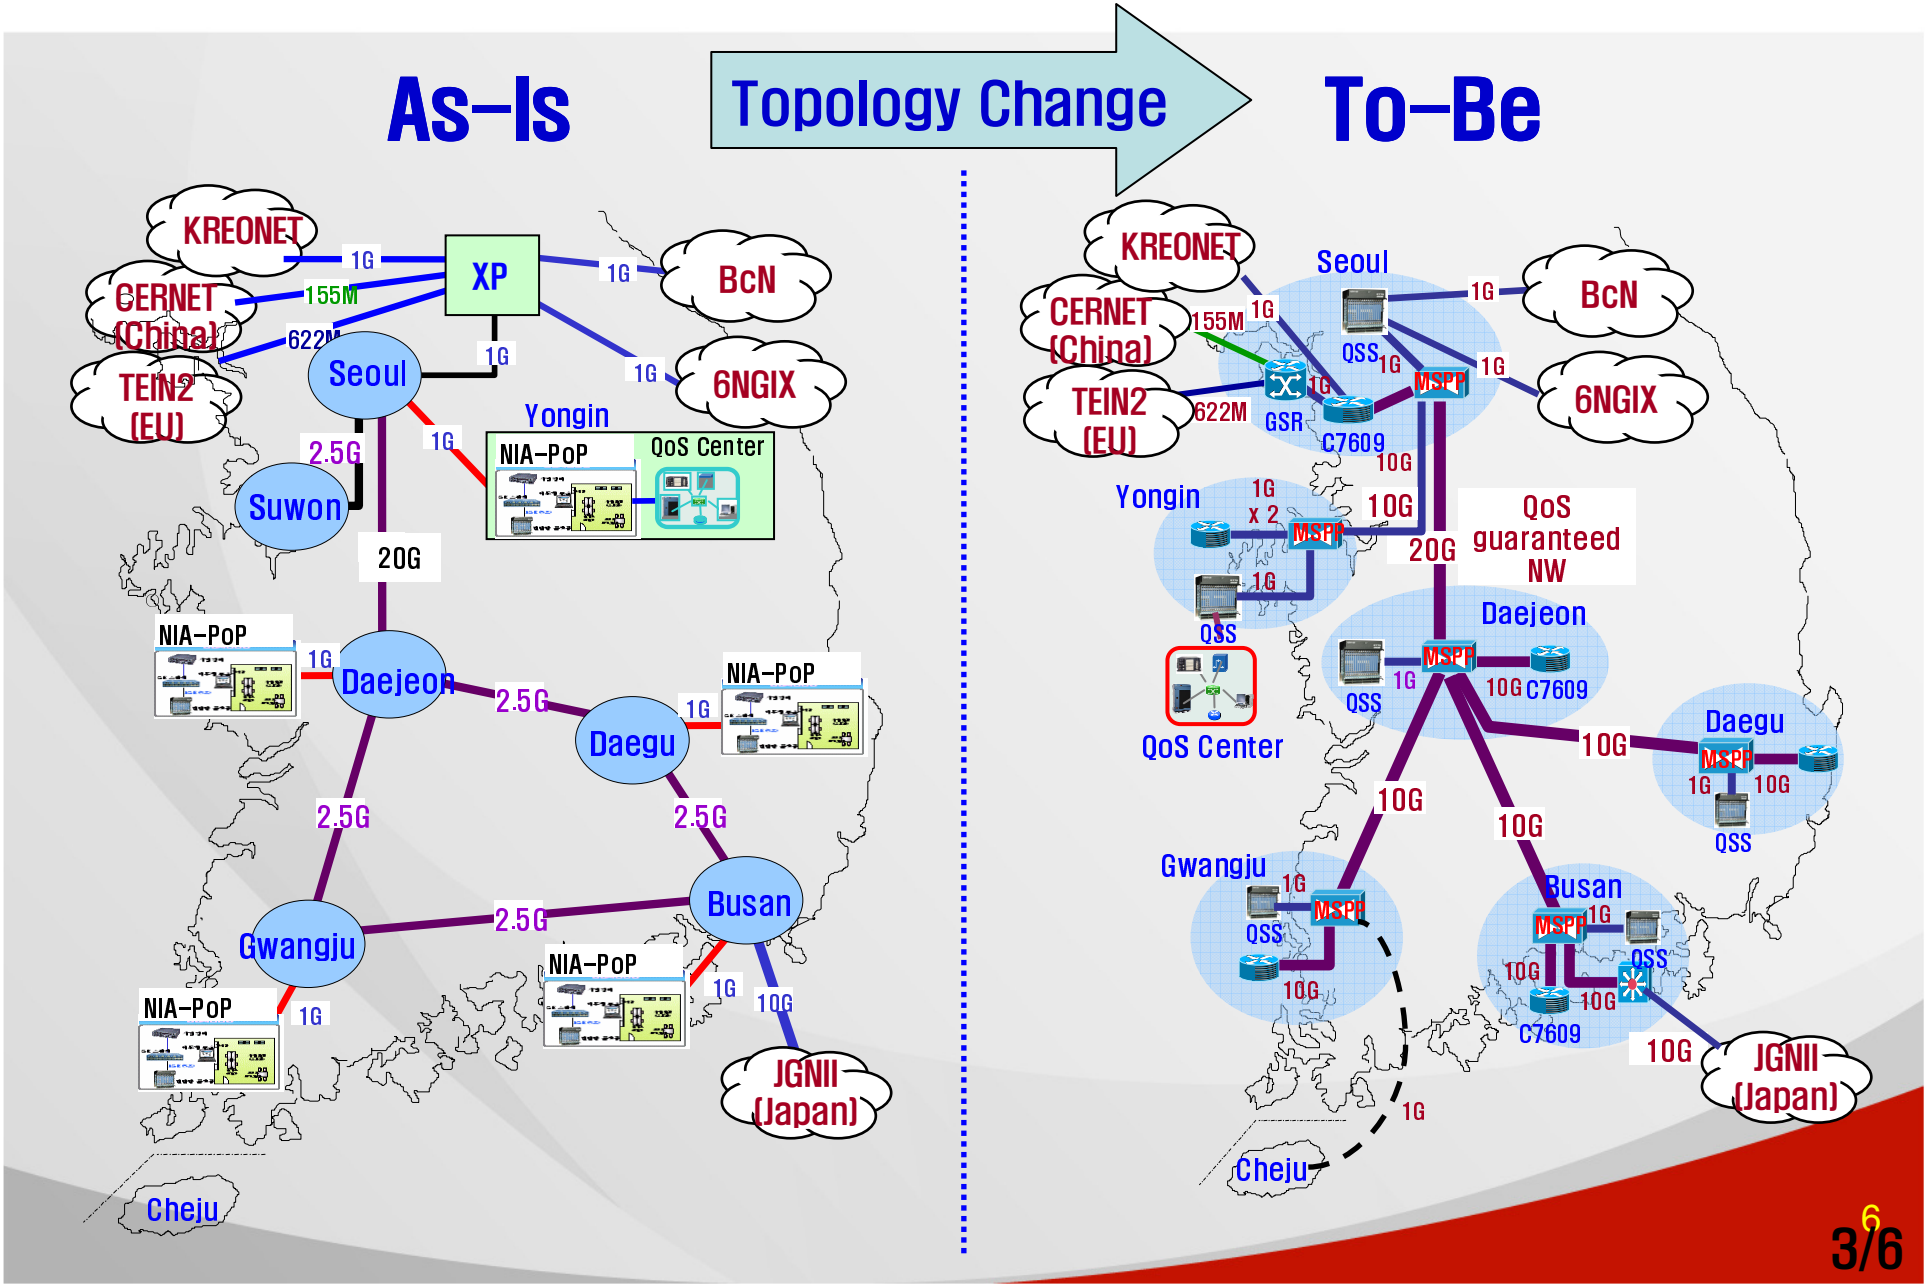
Purposes

NIA 한국정보사회진흥원

- To expand the advanced technological research basis of Korea and to support the local IT industry by providing faster, more efficient networks
  - Support for international cooperation research projects
  - A testbed for the next generation network technology, applications and services
  - Support for Government's pioneering pilot projects with advanced technology (e.g. BcN)

Network Connection

NIA 한국정보사회진흥원



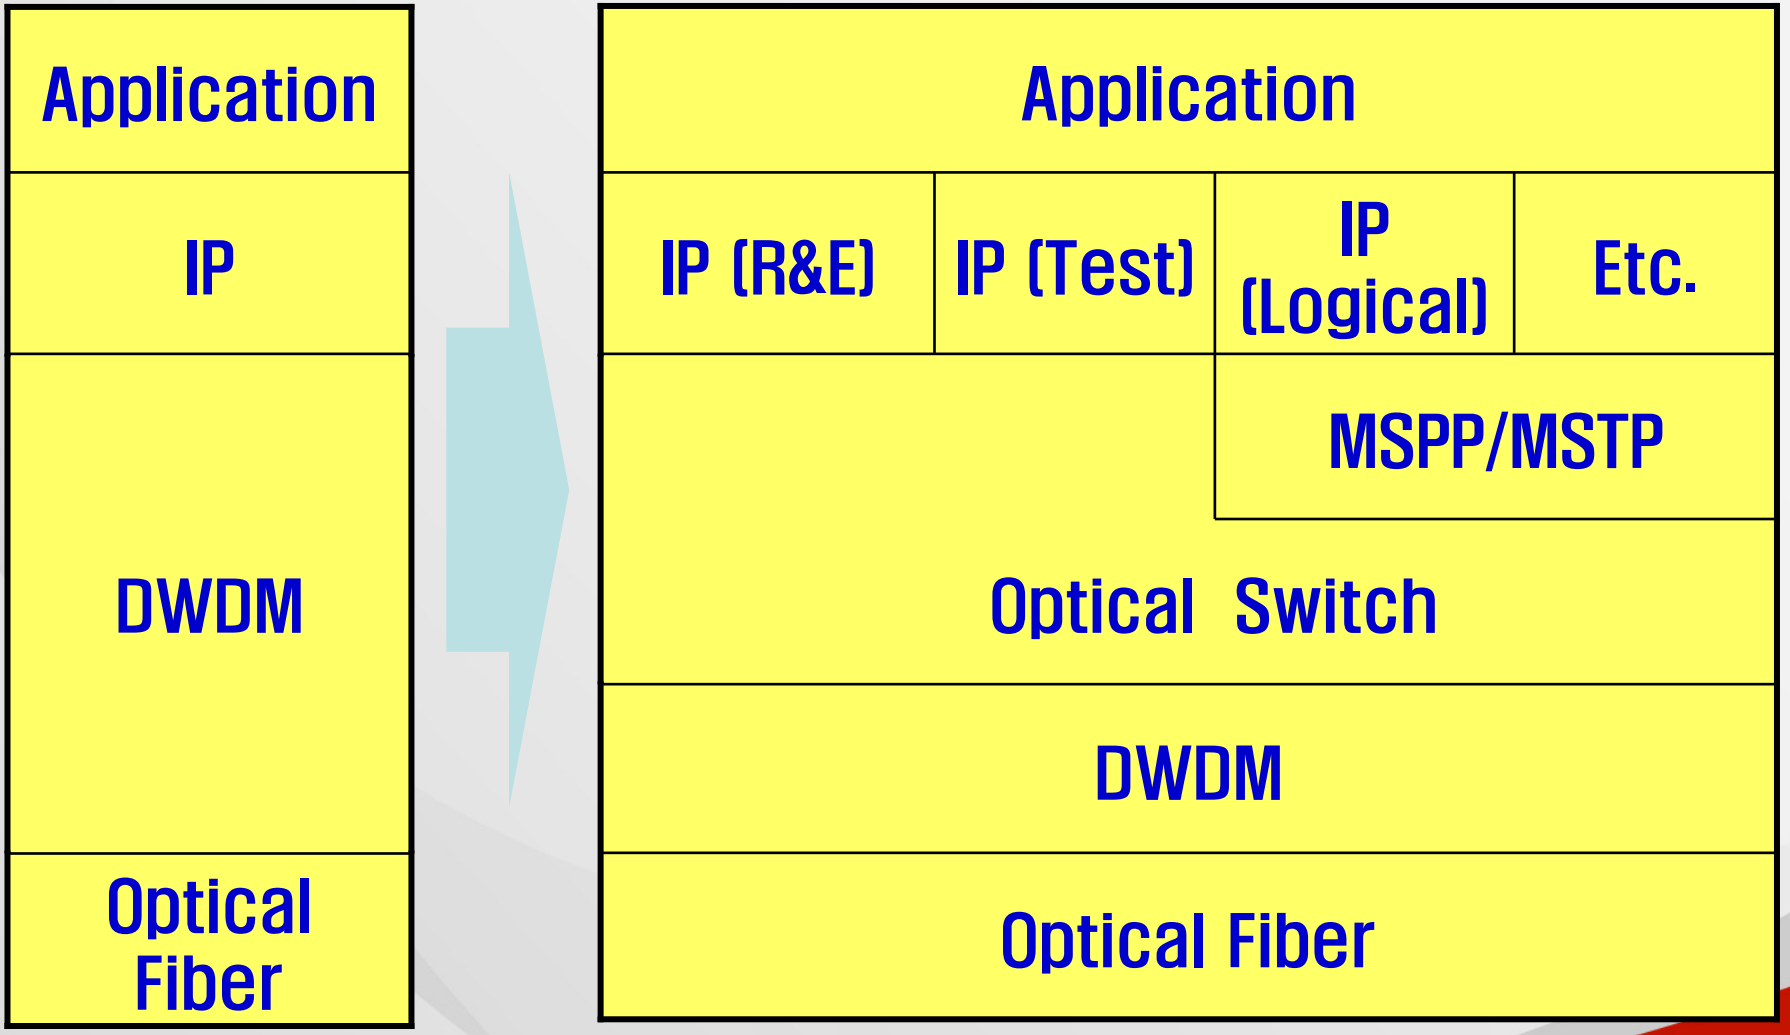
Network Facilities

NIA 한국정보사회진흥원

- 8 Giga PoPs
  - PoPs : Seoul (2), Daejeon, Daegu, Pusan (2), Kwangju, Suwon
- 5 Open Test-beds
  - Seoul (NIA), Daejeon (ICU), Daegu, Pusan, Kwangju
- 2.5G ~ 40Gbps backbone
  - Seoul – Daejeon: 20G
  - Daegu – Daejeon – Kwangju – Pusan: 10G
  - Seoul – Suwon: 10G

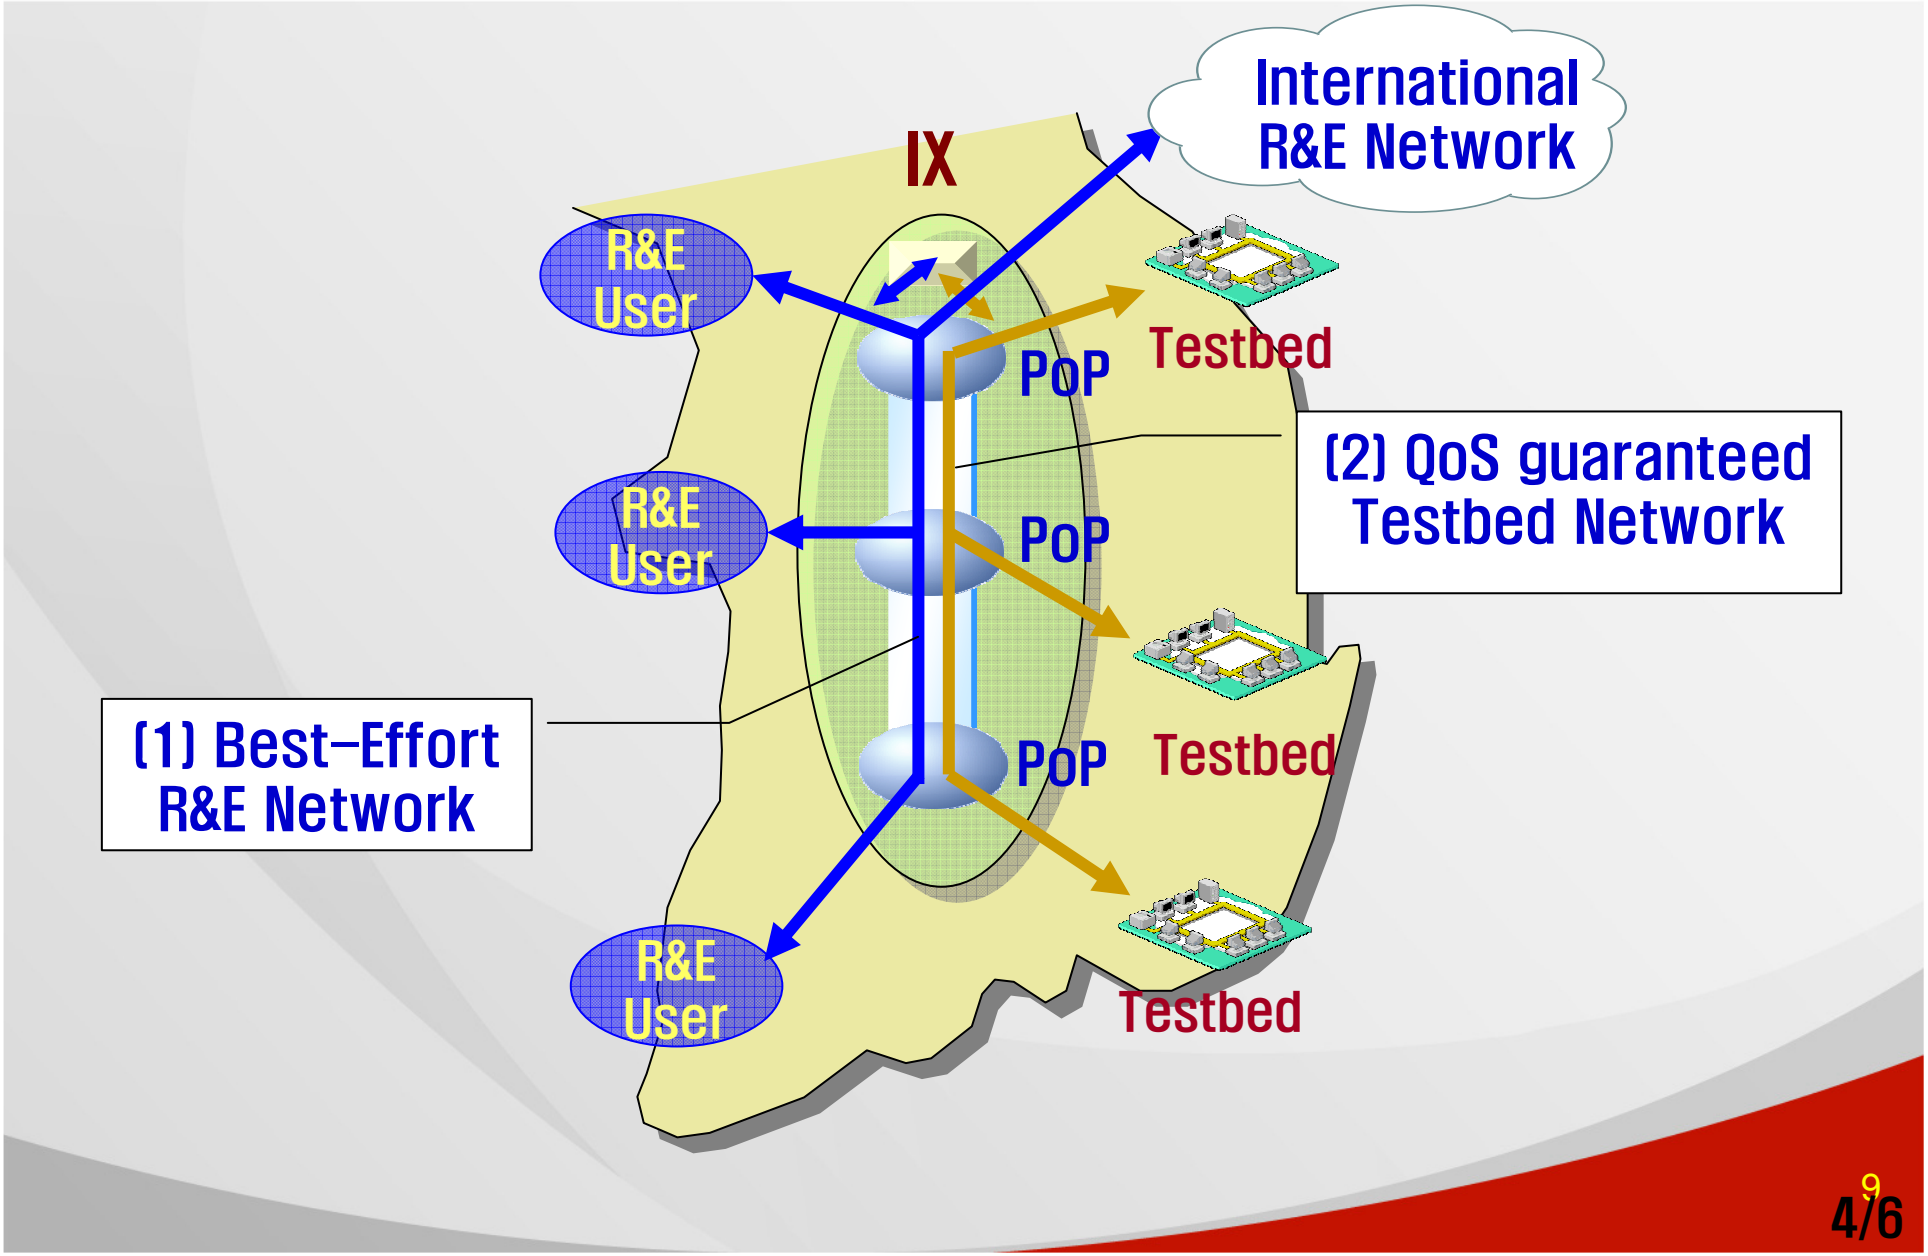
Network Enhancement

NIA 한국정보사회진흥원



Network Function

NIA 한국정보사회진흥원



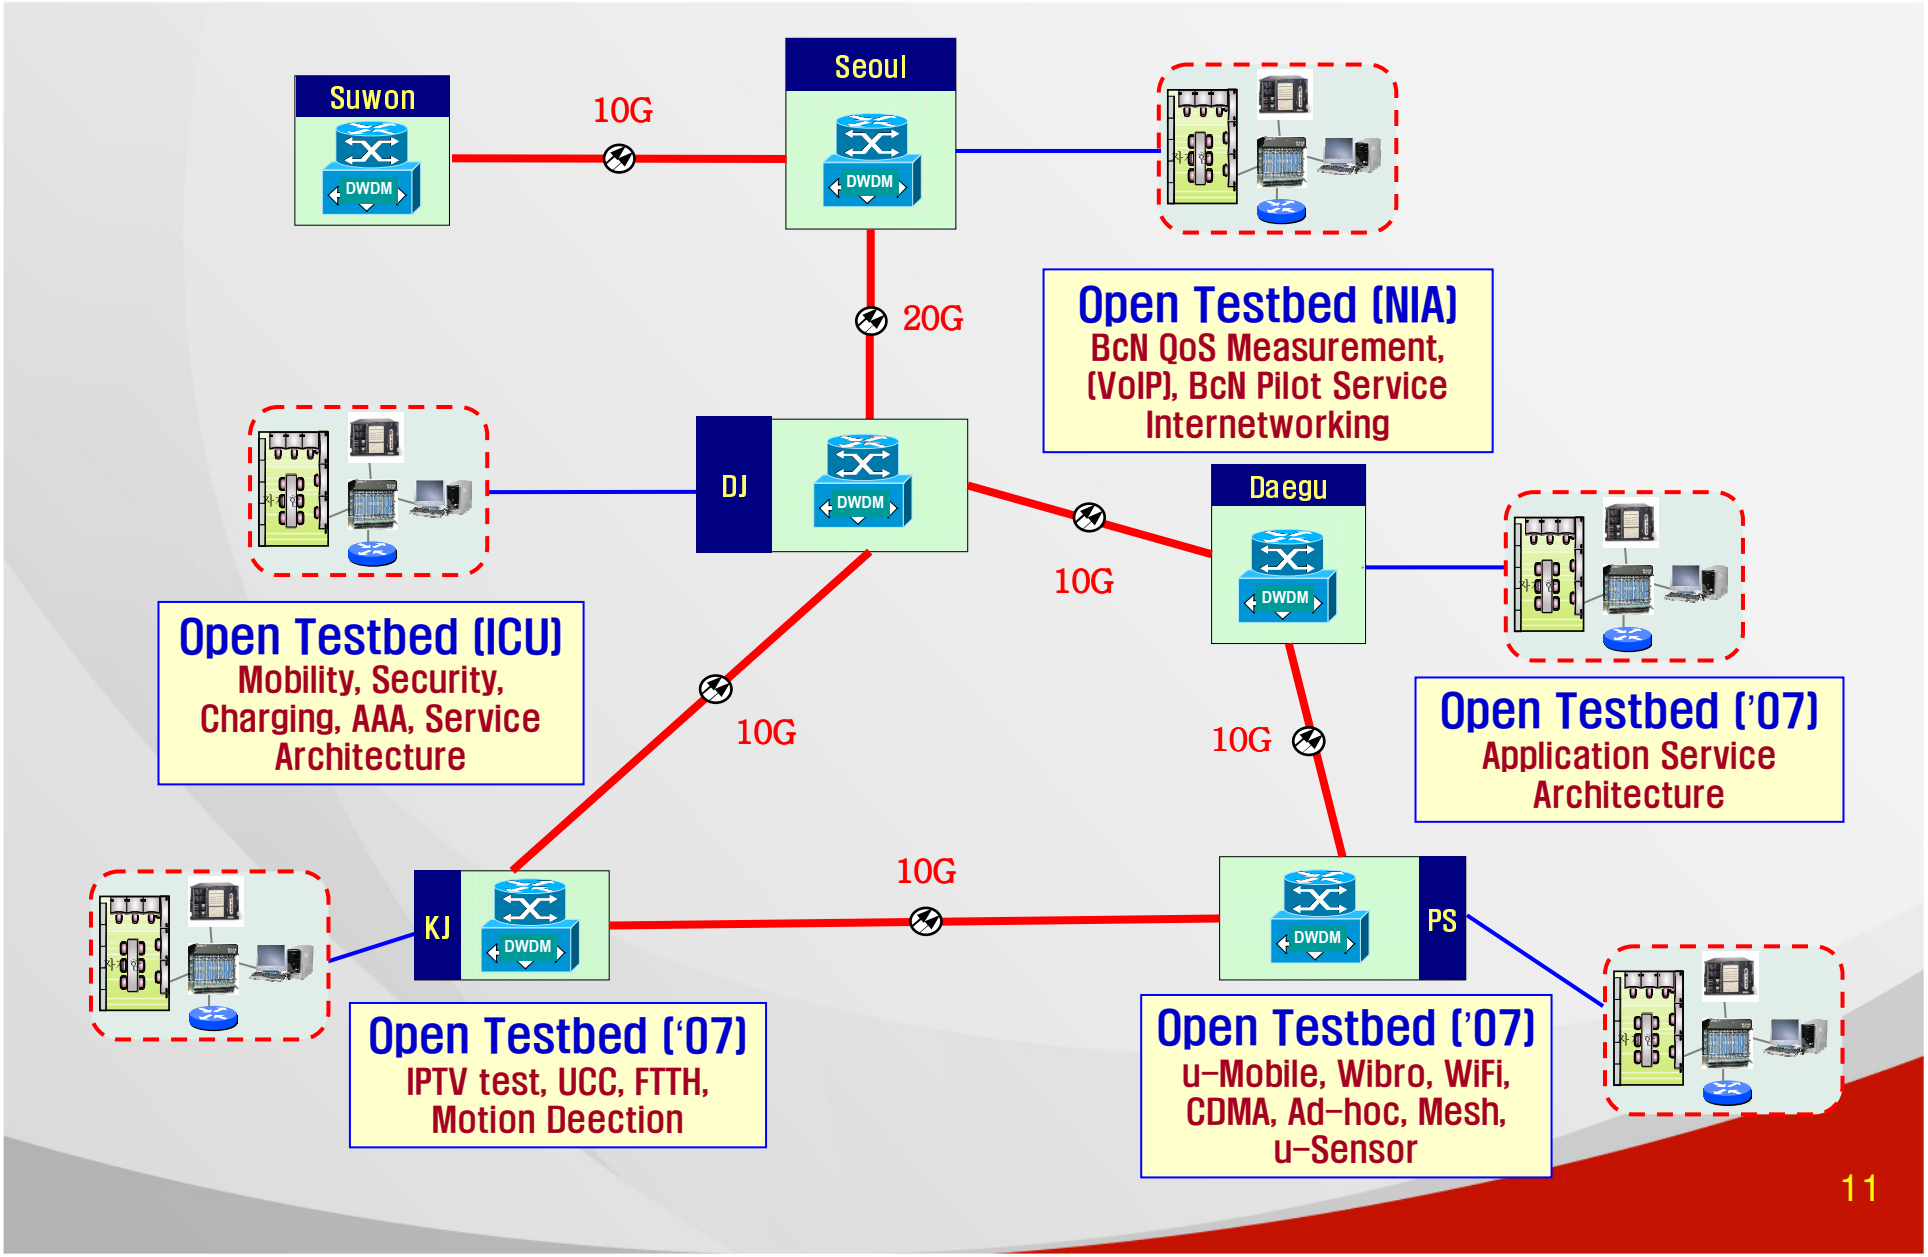
I Overview

II Current Testbed

III FN Testbed

Open Lab Testbed

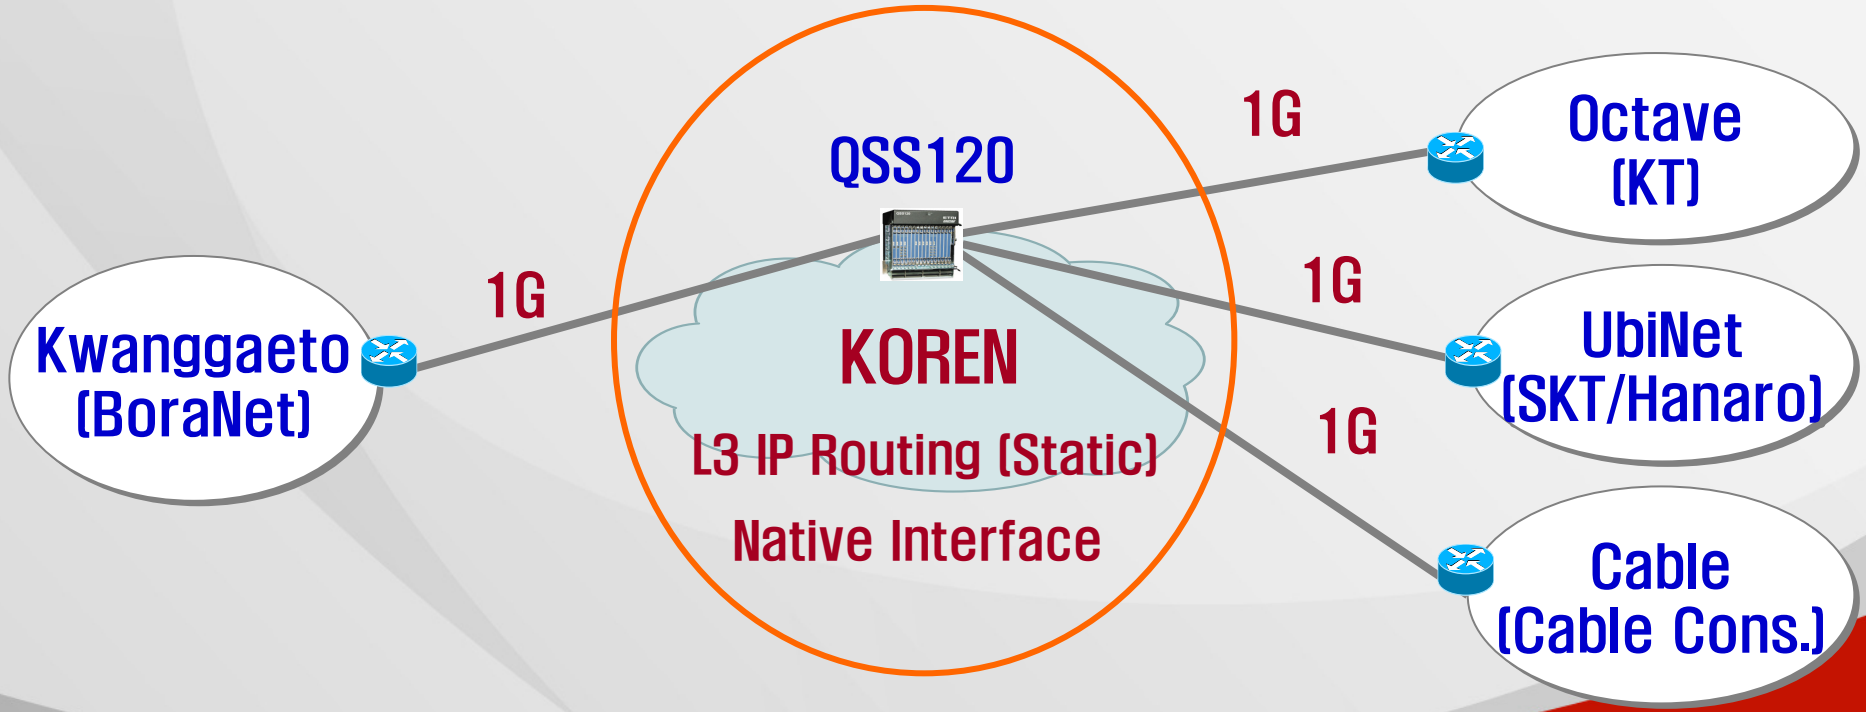
NIA 한국정보사회진흥원



BcN Pilot Service Interworking

❑ Interworking network for BcN Operators

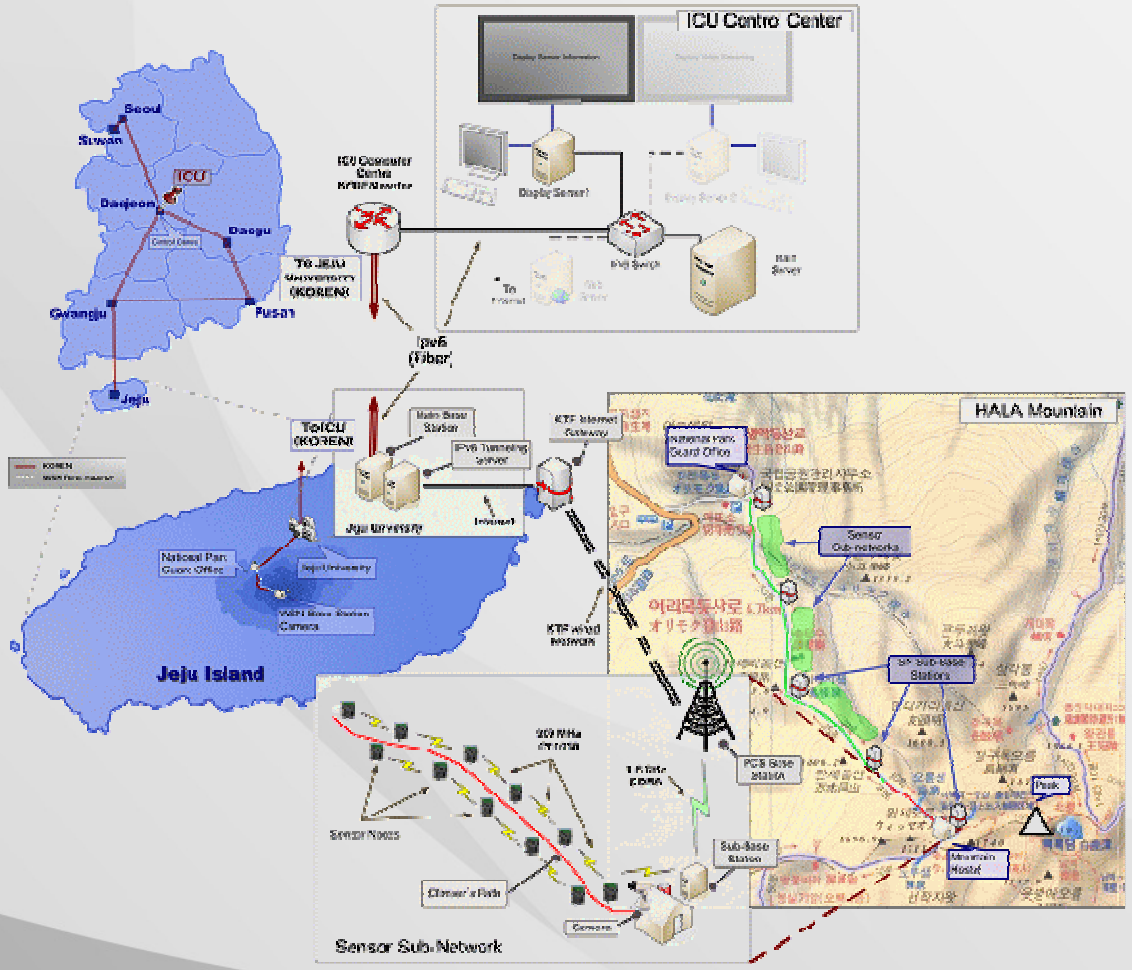
- ➢ Service Interworking Test
- ➢ Terminal Interoperability Test
- ➢ QoS Measurement Center



Sensor Network Research

NIA 한국정보사회진흥원

❑ KOREN-based application test—a nationwide USN (Ubiquitous Sensor Network) Architecture over IPv6

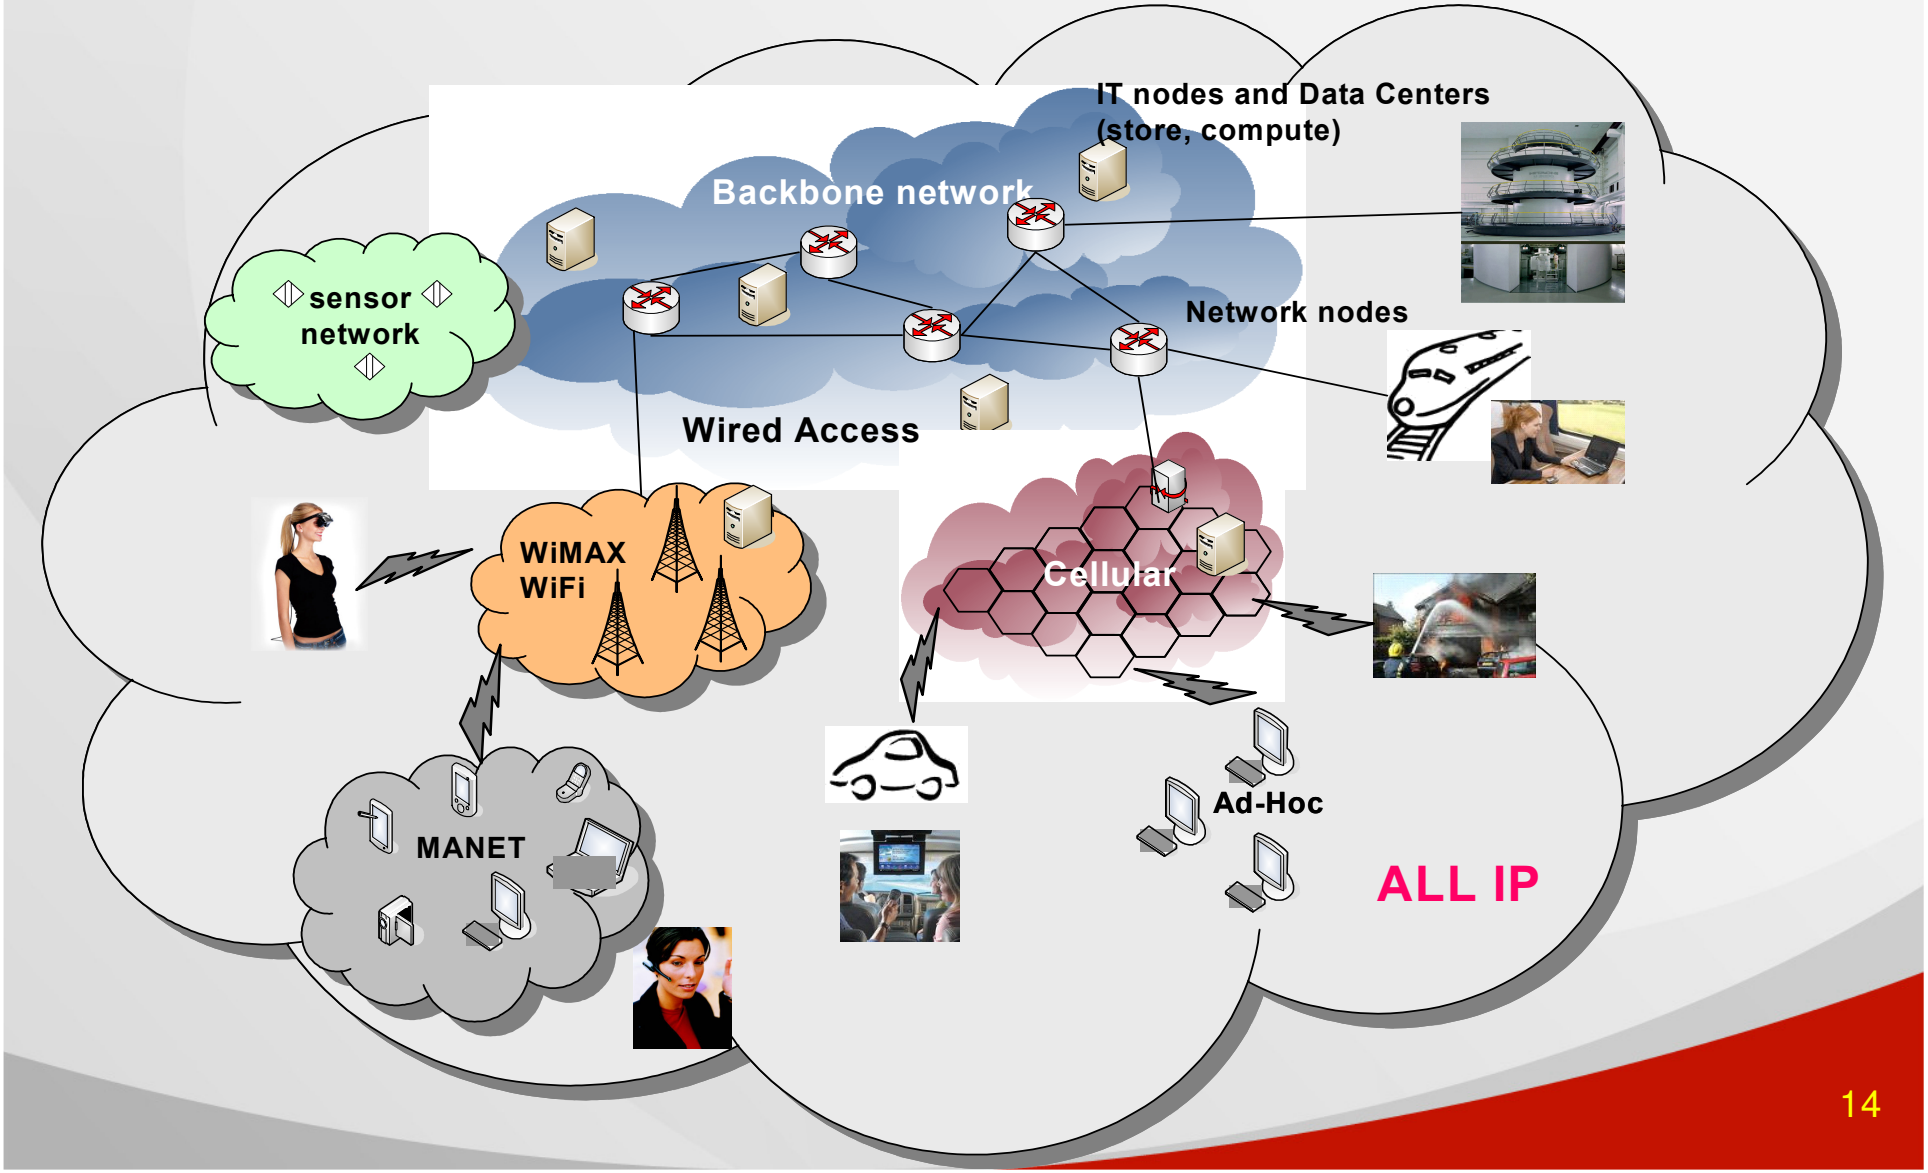


- Low-power consumption sensor development
- Precise weather forecasting using sensor nodes
- Monitoring software development for sensor networks
- Sensor networking architecture
- Transmitting method and management of collected data

OMNIA – Architecture

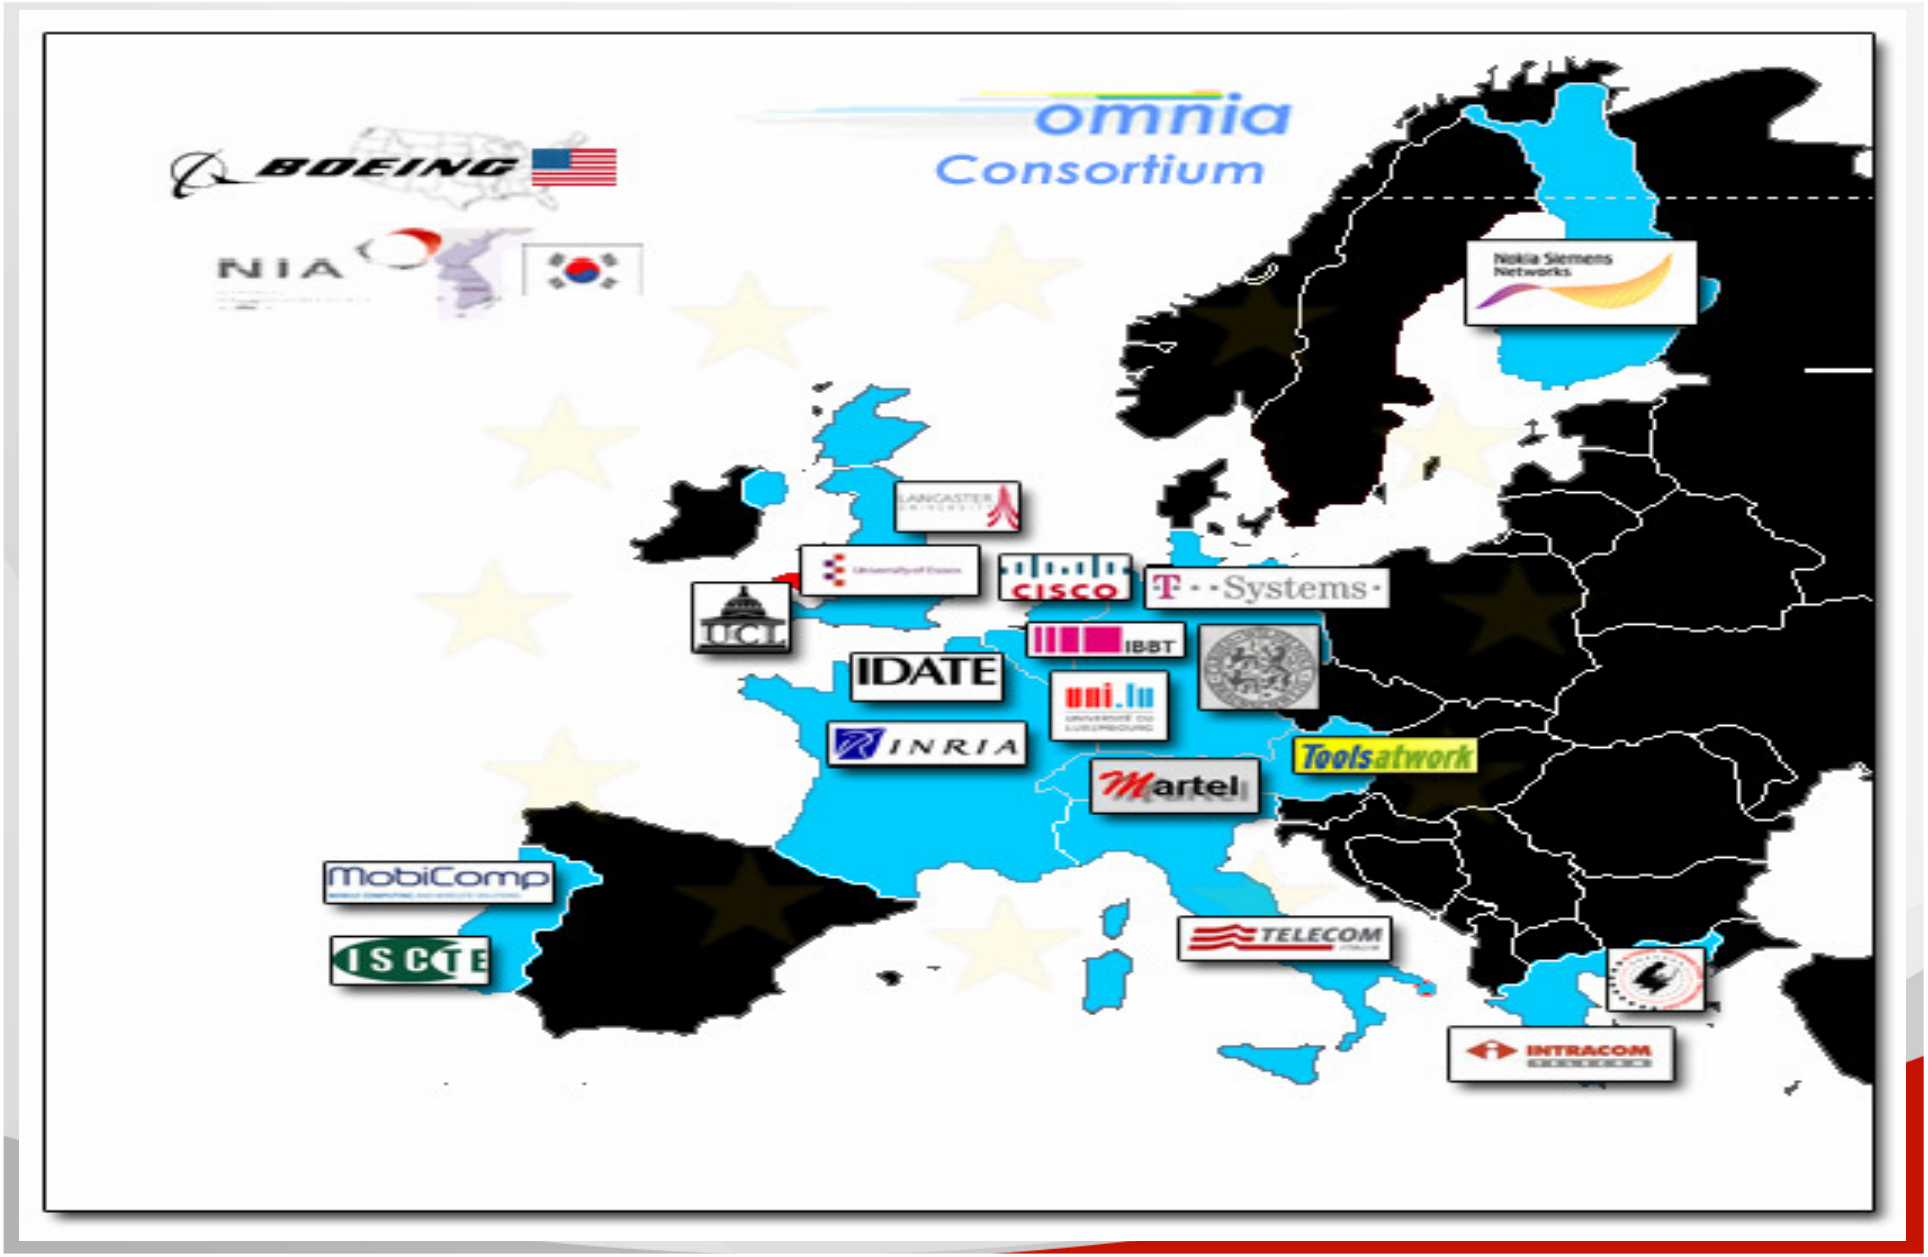
NIA 한국정보사회진흥원

Omnipresent Mobile Next Generation Internet Architecture



OMNIA – Map

NIA 한국정보사회진흥원



WP0
Project Management

Cisco
Martel

WP1 OMNIA Architecture
Architecture definition - user behavior analysis, usage patterns, static & mobile users, scalability, resilience, QoS, E2E, data protection
bidirectional context management, security
Architectural refinement - constant refinement, roadmap definition
Long term clean slate architecture design - US GENI, holistic approach, challenges like new functionality boundaries, electriity consumption

IBBT, Essex, Cisco, Motorola, AIT, UCL, NIA, T-Systems, TI

WP4
Scalable Mobility Support Systems xxx

Scalable solution for very high-speed and highly dynamic network
Privacy policies realisation
Identity and location management
- User based
- Device base
- Both

AAA realisation for mobile environment
- IETF solutions
- New solutions ?
- Trust model for ad-hoc networks
  - Other people resources
  - Overlaying different trust models onto ad-hoc networks

Security
- Legal issues in ad-hoc connectivity provisioning
- Lawful interception

Encryption
Attack avoidance mechanism

UCL
Cisco, T@W?
Luxembourg

WP5
Seamless End-to-End Service Delivery

Seamless mobility between different access technology and services
- Transcoding
- Support for high-speed mobility

Handover issues
Integrated NW & IT Resource Mobility & Mgmt
FMC
E2E QoS
MC capability/compatibility issues between different access technologies
Context aware Application API
L2 L3 interaction and interfaces

Essex
T-Systems
Motorola
IBBT
AIT
UCL

WP6
IP Edge Mobility

Mobile Entity (IP)
- Host, User, NW

Resource Mgmt. IFs
MONAMI6
- Multiple IF Mgmt
- Policy & Preferences

NEMO
MANET
MANEMO
Alternative Solutions

Lancaster
Cisco
INRIA
BOEING

WP7
Proof of Concept

Demonstration key points
- Mobile content sources
  - E.g. Video
- Multicast and broad cast
  - To and/or from mobile source
- Nested mobility ?
- Seamless mobility ?
- Vertical handovers ?
- Network adaptability
  - Trans-coding & Trans-rating
  - Maintaining QoS

Demo Scenario
- Mobile interactive application
  - Mobile gamming
- Mobile content provisioning
  - Tour-de-France
- Emergencies and flash crowd

Cumbria
Use Essex & Gent as tech labs
Use U2010 demo scenarios

Mobicomp
3GDoctors
T@W
Yahoo

All IP, 3G, 4G, WiMAX, WiFi, UWB, FMC, UC, vehicle, train, airplane, Ad Hoc NWs, Mobile User

WP2 Policy & Regulation
Cisco, Motorola, UCL, Essex, Yahoo

WP3 Business Models & Service Innovation
Business models, Use case studies, define applications to be demonstrated in WP7, New services, Social impact

T-Systems, TI, ISCTE, Motorola, iDate, Yahoo, T@W, NIA

WP8
Dissemination Training

Luxembourg
Martel
Cisco

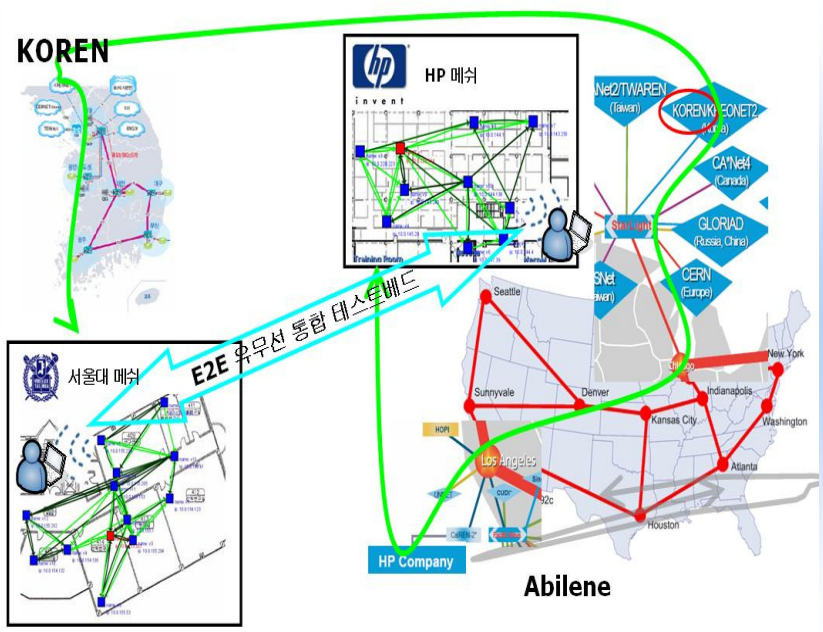
Mesh-based Access Network

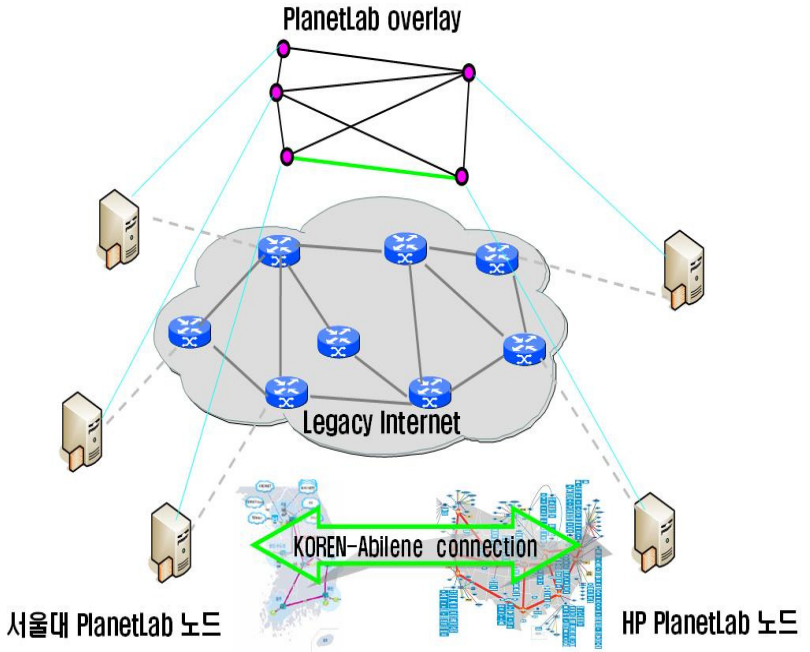
Testbed

- Consortium: SNU, HP-USA (Mobile Media System Lab)
- Testbed Configuration
  - . SNU Mesh – KOREN – Abilene – HP Mesh
  - . SNU PlanetLab node – KOREN – Abilene – HP PlanetLab node

Project

- Performance evaluation
  - . TCP/UDP Data Throughput, Delay, Multi-hop analysis
- PlanetLab Over KOREN
  - . PlanetLab Testing over KOREN





IPTV Overlay Multicast

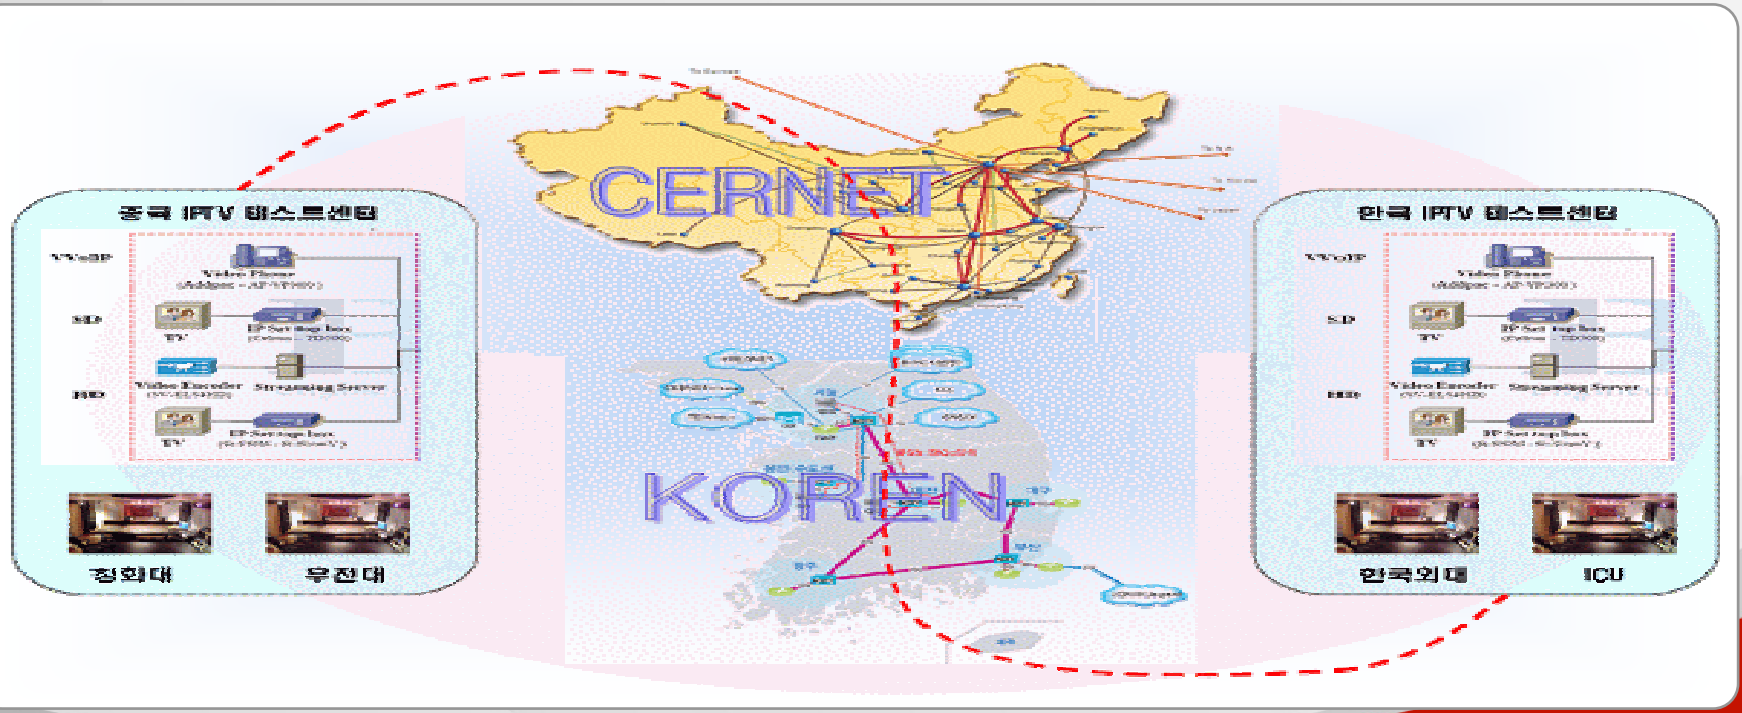
NIA 한국정보사회진흥원

Testbed

- Consortium: HUFS, ICU, RivertreeNet, Tsinghua Univ., BUPT
- Testbed Configuration
  . KOREN Daejeon-Yongin RACF Overlay Multicast Testbed configuration
  . KOREN-CERNET IPTV Service Interworking Testbed Configuration

Project

- End-to-End Resource Control, QoS qualified Multicasting Technology
  . Web-based IPTV QoS scenario, Web-based EPG (Electric Program Guideline) Development
  . NGN RACF based Overlay Multicast Technology
- IPTV Server/Client Test Model Research



Nationwide IP-USN Networking

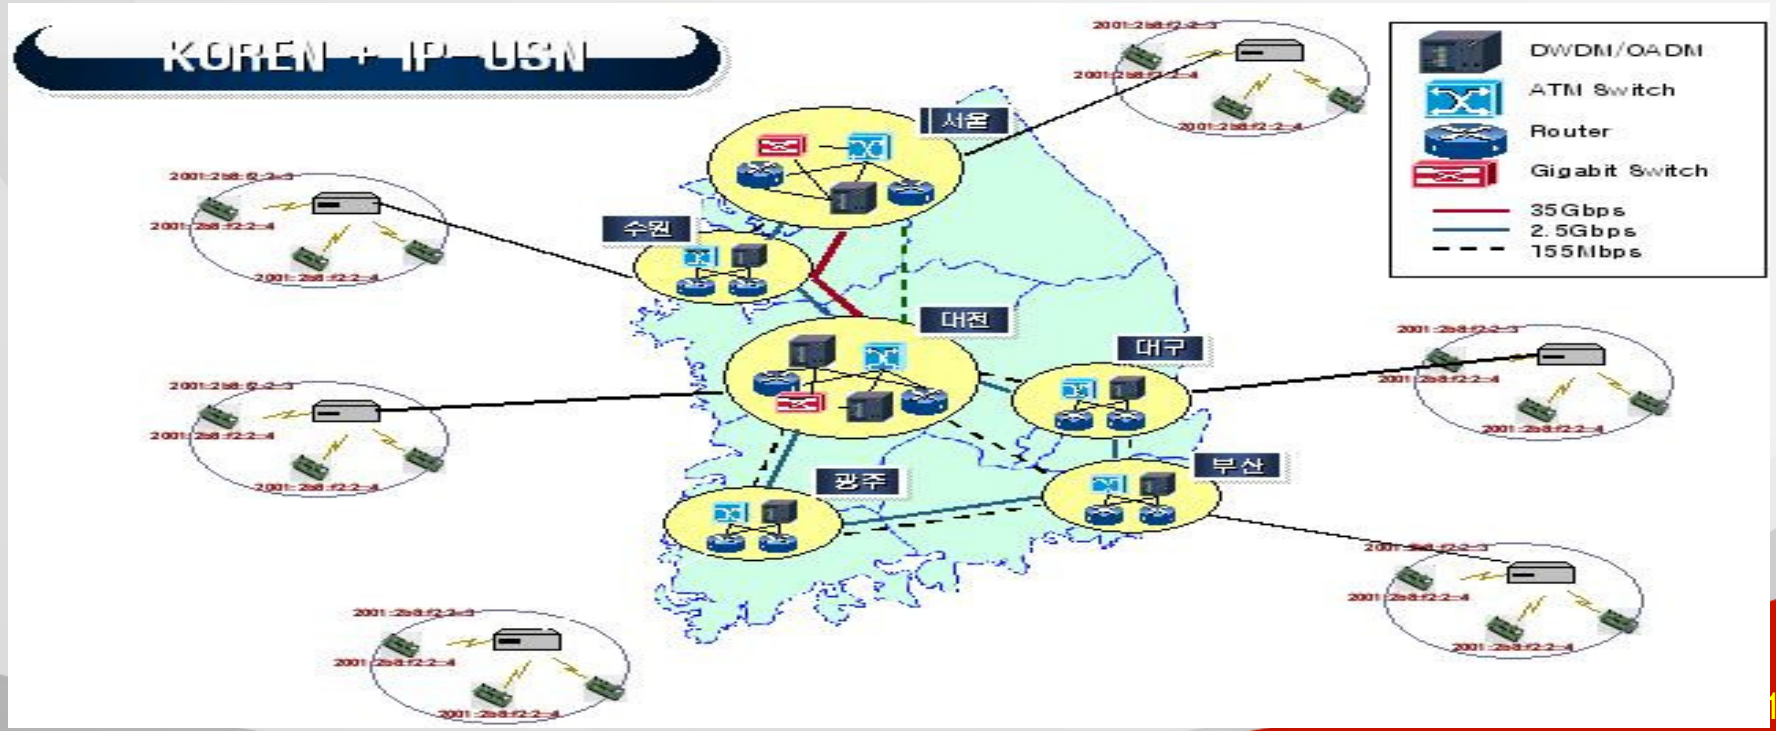
한국정보사회진흥원

Testbed

- Consortium: AJU, PicosNet, iBit, IETF 6LowPAN WG
- Testbed Configuration
  - . IP-USN Interworking Testbed in 6 KOREN PoPs
  - . Test for Different IP-USN Routers

Project

- Interworking and routing protocol test in USN networks
- Efficient Interworking protocol testing between KOREN and IP-USN
  - . IP-USN Bootstrap function
- IP-USN Networking technology Stands with IETF 6LowPan WG



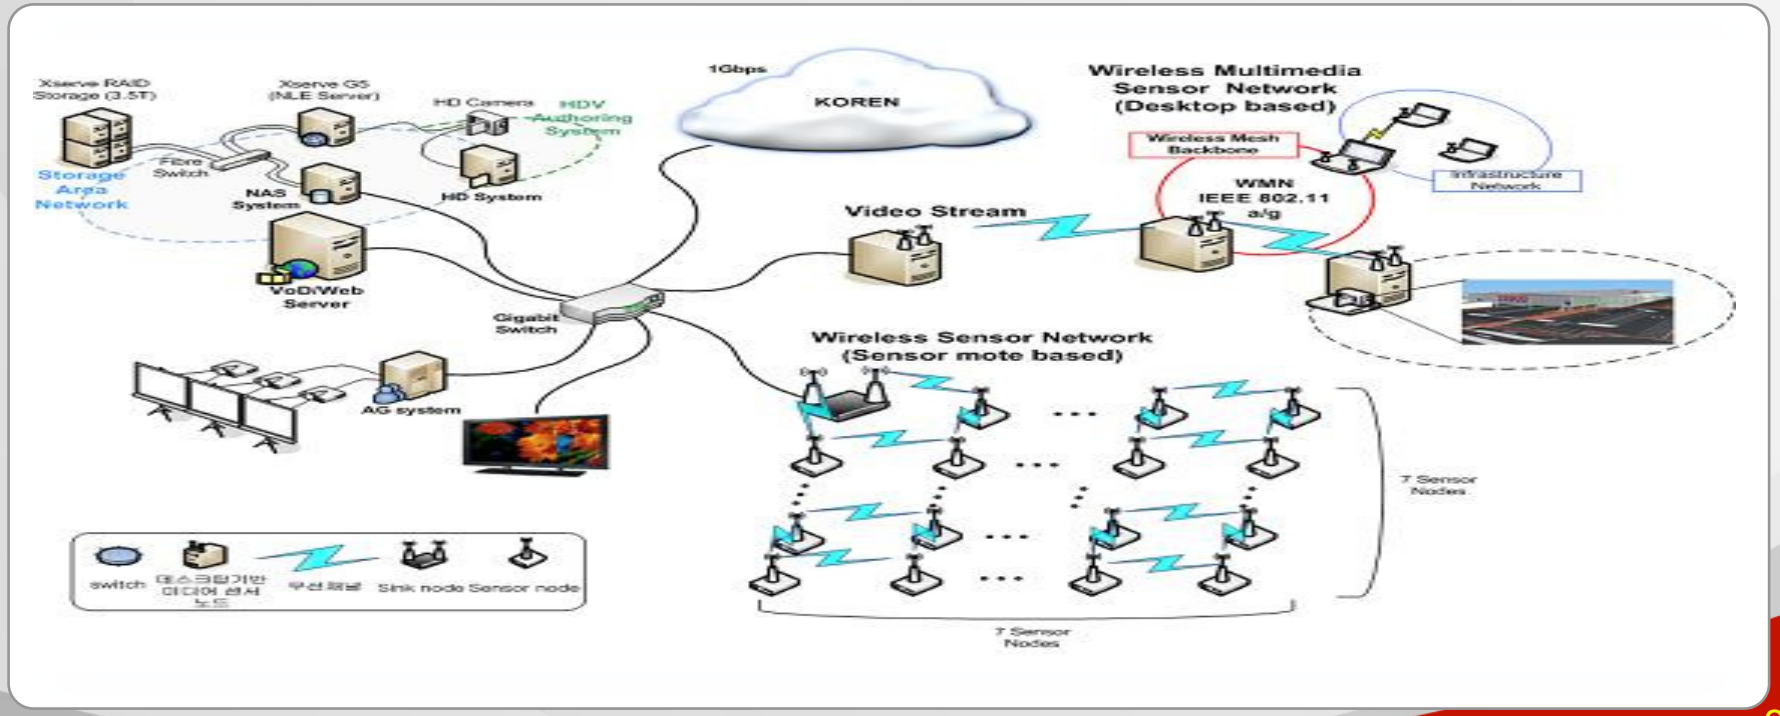
Wireless Multimedia Sensor Network

Testbed

- Consortium: GIST, SKU, OSU, UoII
- Testbed Configuration
  . WMN with KOREN interconnected Server Routers
  IEEE802.15.4/Zigbee-based Sensor node Testbed
  (7X7 Grid Topology)
  . GIST-KOREN-SKU

Project

- WMN based multi-hop, Multimedia transmission technology
  . HD multimedia data transmission technology on Wireless and wired convergence network
- Scheduling technology for minimum interference in WSN network



I Overview

II Current Testbed

III FN Testbed

FN Testbed Activities

NIA 한국정보사회진흥원

- Define the need for Future Network Testbed
  - Purpose of the Future Network Testbed
  - Various Requirements on the FN testbed
- Agenda for research using FN Testbed
  - The anticipated range of experiments
  - R&D Topics on the FN testbed
- International Cooperation
  - Various R&D projects with foreign institutions
  - OMNIA …
- Conceptual design
  - Set-up a reference model for FN Test-bed
  - Refer to world FN testbed architectures
  - Realizing of ideas (Substrates, Network control, etc…)

Future Network Testbed – Short-Term

Tools, Devices

• • •

Service Platform: u-Service Creation Environment

WAP G/W

MMSC

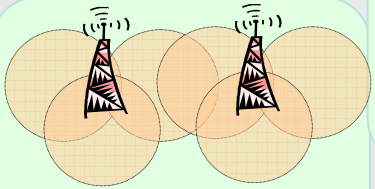
Streaming

DRM

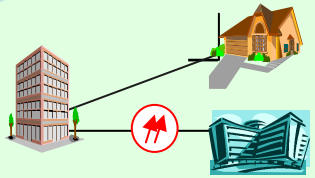
E-Mail

• • •

Backbone and Access: Ubiquitous Connectivity



Wibro-Evo



WLAN based N/W

VAN
WPAN (Ad-hoc)

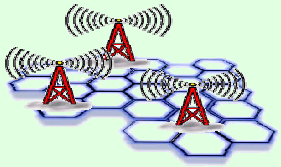
Security, AAA,
Code system

Fixed Mobility Support

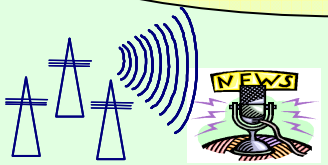
Security Server

Authentication Server

Control Server



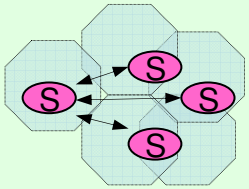
Mobile (2G/3G/
WCDMA/HSDPA)



Broadcasting

• • •

New Access
Tech. – 4G etc.



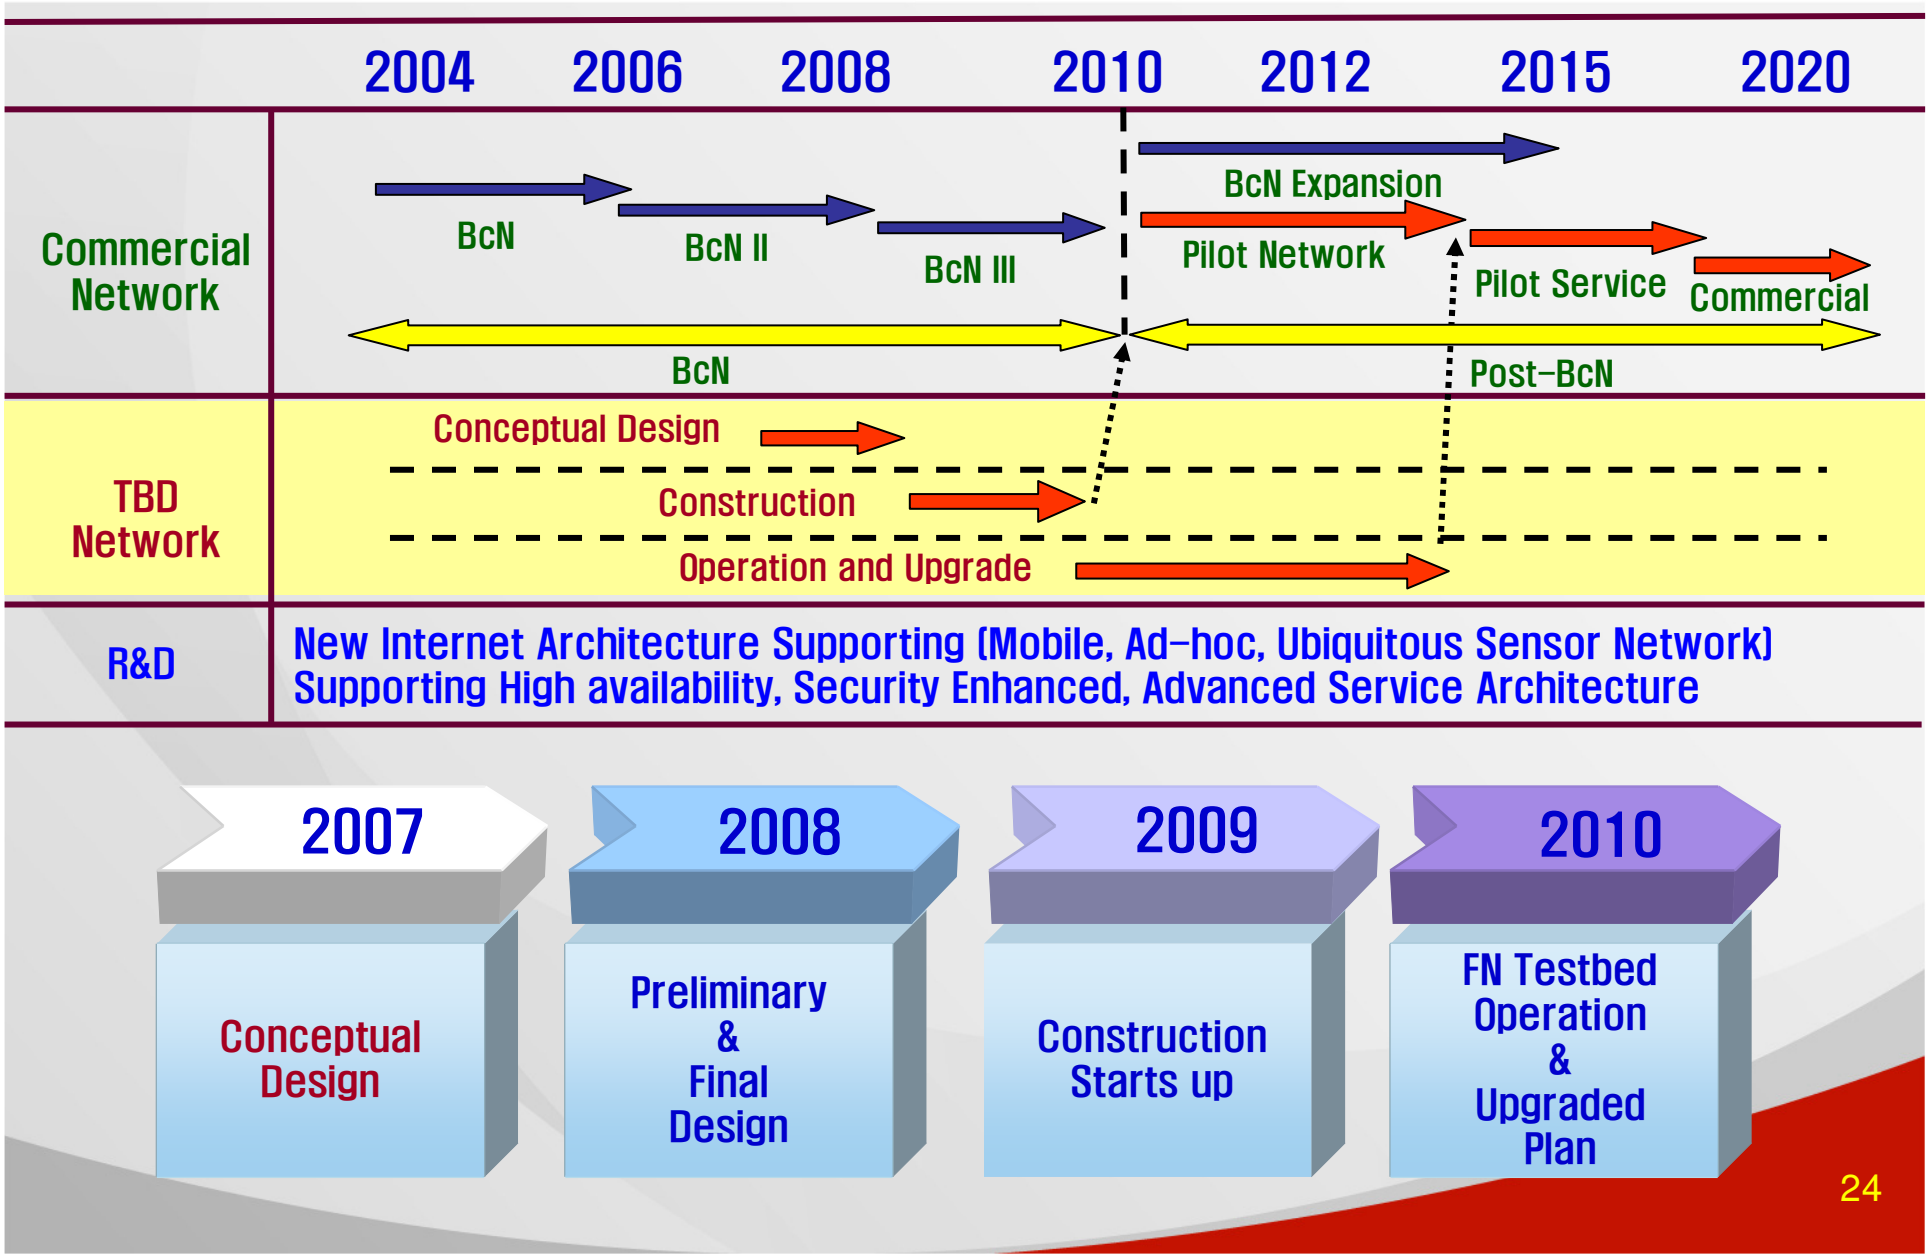
RFID/USN
IP-USN

Terminal/Subscriber Centric: SDR, CR Terminal

Pervasive computing
/Seamless User Experience

FN Test-bed Roadmap

NIA 한국정보사회진흥원



Thank You !!
